for Schools

- 😊 Safety of students
- 😊 Easy attendance system for student and employee
- 😊 Student traceability and parent's undisputed accountability
- 😊 Effortless and efficient management
- 😊 Infrastructure cost is almost nothing

Track

What is the need of Smart Tracker ?

During this period of very rapid changes in innovative technology, the demand of tracking systems has been on the increase as people want to keep their lives more convenient and more secure.

What is Smart Tracker ?

Smart Tracker is a Biometric/RFID Based School Attendance and school bus tracking system. Parents/Guardian of the students will receive an instant SMS alert through our integrated solution on their mobile phones as soon as their child Enters/Exits the school.

Students are given RFID Based I-Cards or will be registered in biometric device. As they show this card on the RFID Reader or verify their biometric identity during Entry/Exit to the school, their parents whether they are at home or at office, they come to know that their child has entered or Exit the school through an instant SMS and School Attendance is marked. The school authorities/Parents can see the Real-Time Attendance of the students from anywhere in the world as they will be having access to a web based software solution.

Apart from this we also have a feature of tracking bus location through GPS. All that needs to be done if anybody wants to track the location of any school bus he/she will have to send a sms to a number given by us with route number of the bus and as soon as the sms is sent , our system will track the bus and reply with the details of bus location via sms.

What we provide?

- ☺ COMPLETE INTEGRATION OF HARDWARE AND SOFTWARE
- ☺ BIOMETRIC DEVICES / RFID CARD
- ☺ RFID READER
- ☺ SMS GATEWAY
- ☺ CLOUD SERVER
- ☺ WEB APPLICATION
- ☺ WINDOW BASED SOFTWARE SOLUTION
- ☺ SUPPORT

Smart Tracker Advantage

Top Reliability

As the quality of a recognition algorithm plays a key role for the success of a tracking product, SmartLogic can present its customers with guaranteed performance and reliability.

Excellent Support

We believe Selling a product means the beginning of the long term relations with a customer. SmartLogic provides various ways of customer support to the end of customer's success.

Wide Flexibility

One of SmartLogic strengths is wide flexibility which comes from various choices of customization as per the needs.

Smart Tracker

SMART

SMARTLOGIC operating model

SMARTLOGIC will execute this project in a fixed price model, by taking complete ownership of delivering the tasks which fall within our scope of services and support. Project will be executed in an onsite-offshore model, with resources working during the normal business hours of the respective location. Any changes to the scope of work will follow change management process. As part of this process, SMARTLOGIC team will analyze the change in scope; estimate the impact on schedule, effort and cost and resubmit a SOW amendment if there is any change to the timeline or effort or cost.

Pricing

SMARTLOGIC will provide the services in various price models. If the delivery or maintenance services are not completed as per the milestone due date because of non-performance of SMARTLOGIC resources or other SMARTLOGIC related issues, SMARTLOGIC is willing to pay penalty up to 10% of the total cost planned for each month.

An overview of
GPS System

The logo is centered within a large, light blue, irregular circular shape that resembles a cloud or a stylized bubble. This shape is decorated with several smaller, solid-colored circles in yellow, light blue, red, green, and purple. The background of the entire image is a solid blue color.
